
Equatorial · 37.77° N, 0.00° E

Equatorial · 37.77° N, 0.00° E. Local apparent solar time. UTC; design date 2026-06-21. Radius 80 mm. Tilt the disc 52.2° from horizontal so its face is perpendicular to Earth's axis, facing the north celestial pole. The rod is perpendicular to the disc. This is the pole-facing face only; it is not illuminated in the opposite half of the year. Nodus 25.6 mm along the style from its foot.

100 mm calibration - verify before cutting

Gnomon rod - length gauge

A4 | plate radius 80 mm | print at Actual size / 100%

Use a thin rod 49.60 mm long, measured from the plate surface (add any buried mounting length). Set it perpendicular to the plate at the filled dot.

The cross marks the nodus, 25.60 mm along the style from the filled foot dot. Add a small bead or notch there to cast a distinct date-line shadow; an ink cross alone will not do this.

Use a thin shadow-casting edge. Material thickness, kerf and fold allowance are not compensated in these templates.

Tilt the disc 52.2° from horizontal so its face is perpendicular to Earth's axis, facing the north celestial pole. The rod is perpendicular to the disc. This is the pole-facing face only; it is not illuminated in the opposite half of the year.
